dariorasero

dariorasero® aluminium scoops

Instructions for use, safety, cleaning and maintenance · round and flat scoops, all sizes
Manufacturer: Euro Satip Srl, Via Nicomede Bianchi 109, 10146 Torino – Made in Italy ·
info@dariorasero.com · +39 011 74 92 922

READ BEFORE USE

Read these instructions before use and keep them for the whole life of the product. The «General warnings and conditions of use» (dariorasero.com) are also part of these instructions.

1. INTENDED USE

Taking, measuring and transferring food, particularly loose and dry food, within the limits of chapter 4. Heavy-duty handling and abrasive materials (materials testing laboratories, industry) only with dedicated scoops kept separate from those used for food.

PROHIBITED USE

- With strongly acidic or strongly salted foods: brines, salt, vinegar, citrus fruit, tomato sauces, sorbets and preparations made with citrus or acidic fruit.
- First for non-food substances and then for food.
- As a lever or hammer.
- Where combustible dusts are present (for example flour, sugar, starch), if the explosion risk assessment does not allow it: aluminium striking rusty steel can produce sparks.

NOTE – WHY NOT WITH ACIDIC OR SALTED FOODS

- Aluminium is protected by a thin natural oxide layer, which acids and salt dissolve.
- The metal does not come off in pieces: it passes into the food in dissolved form, as ions (migration), all the more so the more acidic, salted and hot the food is and the longer the contact.
- This adds to the aluminium already present in the diet; high and prolonged intake can affect the nervous system and bones, especially where kidney function is reduced.
- The food may take on a metallic taste or darken; small pits form on the scoop, making it difficult to clean.

2. USE AND CLEANING

- Wash and dry the scoop **before first use, at the end of each shift and at every change of product**.
- Between uses, do not leave the scoop in the product: place it on a clean rest.
- Aluminium conducts heat and cold: with very hot or very cold products, wear suitable gloves.
- Wash **by hand** with hot water and neutral detergent and dry immediately. **Do not wash in a dishwasher**: alkaline detergents darken and stain aluminium. Do not use chlorine, caustic soda, acids, scouring pads or abrasives.
- If the food safety plan requires sanitising, use products compatible with aluminium (pH-neutral or alcohol-based) and rinse.

3. INSPECTION, STORAGE AND DISPOSAL

Replace the scoop if it is deformed, cracked, corroded, or if the edge is dented or burred. Store it clean and dry, separate from scoops used for other substances. At end of life: metal recycling.

4. FOOD CONTACT

The scoop is entirely intended for food contact. The declaration of compliance is sent with the shipping confirmation.

INSTRUCTIONS FOR ALUMINIUM ARTICLES

- Not suitable for contact with strongly acidic or strongly salted foods.
- Intended for contact with food at refrigerated temperatures.
- Intended for contact with food at non-refrigerated temperatures for periods not exceeding 24 hours.
- Intended for contact at room temperature, also for periods exceeding 24 hours, with the following foods: cocoa and chocolate products; coffee; spices and herbs for infusion; sugar; cereals and cereal products; non-fresh pasta; bakery products; dried pulses and pulse products; dried fruit and nuts; dried mushrooms; dried vegetables; confectionery products; fine bakery wares, provided that the filling is not in direct contact with the aluminium.

Warranty, liability, obligations of professional users, traceability and reporting: see the «General warnings and conditions of use» published on dariorasero.com. In case of discrepancy between the language versions, the Italian version prevails.
